Team Budget Planner

Writeup

GitHub Repo: github.com/AkshayTR2023/Team-Budget-Planner-JavaScript.git

Steps

HTML:

1. Create a new HTML file (**index.html**).

2. Include the Bootstrap CSS file by adding the **<link>** tag with the appropriate **rel** and **href** attributes.

3. Create a header section using the **<header>** element and apply Bootstrap classes for styling.

4. Add a container element, **<div class="container">**, to enclose the main content of the page.

5. Inside the container, add the form for adding deals and use Bootstrap classes for consistent styling.

6. Create a footer section using the **<footer>** element with copyright information, and apply Bootstrap classes for styling.

7. Include the Bootstrap JavaScript file using the **<script>** tag.

8. Add a separate **<script>** tag to include **app.js** JavaScript file

JavaScript:

1. Create a new JavaScript file (**app.js**)

2. Define required JavaScript functions and variables.

3. Use JavaScript to select and manipulate HTML elements - form inputs, buttons, and lists.

4. Add event listeners to handle user interactions – form submissions.

5. Add necessary logic to handle the form submissions and perform the desired actions - creating new objects, updating the UI, or calculating budgets.

6. Use JavaScript to dynamically update the HTML content, such as adding new list items and updating the total budget.
